

# Forest History Society Issues Series

The Issues Series published by the Forest History Society are booklets that bring a historical context to today's most pressing issues in forestry and natural resource management. FHS invites authors of demonstrated knowledge to examine an issue and synthesize its substantive literature. The Issues Series—like its Forest History Society sponsor—is non-advocacy. The series aims to present a balanced rendition of often contentious issues. They are attractive, informative, and easily accessible to the general reader.

## AMERICAN FORESTS

A History of Resiliency and Recovery

by Douglas W. MacCleery

Many of today's forestry debates hinge on "how much there is" and "how much there was." *American Forests* documents the changes our nation's forests have experienced from colonial times to the present; covering Native Americans, population and agriculture, the industrial revolution, and early conservation efforts.

## FOREST PHARMACY

Medicinal Plants in American Forests

by Steven Foster

The identification of taxol as a potential cancer fighting compound highlighted American interest in plant-derived medicines. Another 14 plants are discussed in detail including ginseng, goldenseal, passionflower, mayapple, bloodroot, and others.

## NEWSPRINT

Canadian Supply and American Demand

by Thomas R. Roach

*Newsprint* documents the growth of the Canadian newsprint industry and its traditional reliance on U.S. markets. The author discusses export restrictions and tariffs; government intervention, the changing structure of Canadian forests; international competitiveness and new approaches to fiber production.

## AMERICA'S FIRES

Management on Wildlands and Forests

by Stephen J. Pyne

Fire is at the heart of many forest health and sustainability issues being discussed today. Written by the authoritative expert on the subject, this booklet documents the extraordinarily successful twentieth century campaign to prevent and suppress wildland and forest fires.

## FOREST SUSTAINABILITY

The History, the Challenge, the Promise

by Donald W. Floyd

This booklet suggests that forest sustainability on a global basis is a distant, worthy, and perhaps unobtainable goal without significant changes in technology and human population control. *Forest Sustainability* presents a historical context to the subject that helps the reader understand the nuances of this rapidly evolving topic.

## CANADA'S FORESTS

A History

by Ken Drushka

A comprehensive overview of how humans have used Canada's forests in the past and the current state of those forests. It analyses changes in human attitudes toward forests and the author argues that, despite the centuries of use, the Canadian forest retains a good deal of its vitality and integrity.
